

Austram Gothic Arbor Instruction Supplement

The Gothic Arbor is very easy to assemble. There are just a few tips that will make the process smoother:

Assemble the arch first. With the arch on its side, attach the side panels.

Do not tighten ANY screws. Save this for the very last step in the process.

If you have any trouble matching predrilled holes to screws check to make sure that all screws are loosened. It may help to wiggle the arbor a little while trying to push the screws through the holes.

When assembly is complete, tighten all screws to secure. Arbors are a great way to add character to your garden. Hang the Gothic arbor with vines and or lighting for stunning effect.
